Innovative Water Services for South- East Asia

Our members

YOUR PARTNER FOR SUSTAINABILITY AND MANAGEMENT ISSUES

OUR STORY

Asian Management Consulting (AMC) is an Indonesian based consulting firm that has established a solid track record with international and national enterprises on various development projects and projects with private enterprises in the sectors of environment, energy and climate change, waste and wastewater issues, education, social protection, health, governance, and management. Projects have been conducted in Indonesia, India, and Vietnam.

OUR PROJECT PARTNERS

OUR SERVICES

- Technical Assistance and Consultancy
- Knowledge Management
- Study and Assessment
- Workshop and Seminar Facilitation
- Monitoring and Evaluation
- Training and Capacity Building

OUR MISSION: To protect the environment and promote resourcing for a better planet

OUR STORY

Besino Environment originated as a joint water investment platform in China, established by berlinwasser (Germany's largest water company) and Metito Group (a Dubai-headquartered water treatment company). In December 2023, Besino officially became a proud member of CITIC Pacific.

Since entering the Chinese market in 1997, Besino has evolved from a specialized water investor and technology provider into a leading comprehensive environmental service provider. Besino has 26 ongoing long-term projects in 11 provinces in China, with a total capacity of over 2.5 million m3/d.

Backed by robust shareholder support, Besino inherits over 160 years of advanced water treatment and O&M expertise from berlinwasser, alongside nearly 60 years of desalination and industrial wastewater experience from Metito. Today, we boast exceptional financial strength, robust capital operation capabilities, extensive technical expertise, a global team of experts, and a worldwide R&D network.

OUR References

OUR PRODUCTS/SERVICE

Operation & Investment Models Available:
O&M/BOT/BOO/ROT etc.

We don't just sell equipment we can invest, build (or retrofit) and operate the water and wastewater facilities to save your capital and management time.

Recognized Expertise and Track Record

High-Speed Settling SandFluss™ Double capacity, Half footprint

Main Applications:

- First-flush rainwater treatment (industrial sites or park)
- Capacity expansion of existing water treatment plant
- Fine particle settling (Semiconductor/Solar Panel, etc.)
- Pretreatment of wastewater reclaim (before UF)

YOUR PARTNER FOR WATER, ENERGY AND THE ENVIRONMENT!

OUR STORY

Founded in March 2018, in Ho Chi Minh City Vietnam, by Uwe Dechert as a 100% foreign owned Company.

OFFICIAL REPRESENTATIVE

BUCHER unipektin AG

Bucher unipektin AG is technology partner and supplier for solid-liquid separation, filtration, juice treatment and concentrate production.

SCHAUB Umwelttechnik GmbH

Innovative lime and powdered activated carbon systems, customized for your specific application.

Lime and activated carbon are used to treat water and purify exhaust gases from combustion power plants. They help to protect our environment and supply us with water. The equipment for this is made by us.

BUCHER
unipektin

OUR SERVICES

- Project Management (International & local engineers)
- Local and international procurement
- Value engineering
- Site supervision (Civil, mechanical & electrical)
- Testing, commissioning, technical assistance
- Operation & maintenance
- Training
- Documentation
- Equipment for solid liquid separation
- Lime-milk dosing preparation and dosing systems

MEET THE 'PEOPLE FOR PROCESS AUTOMATION'

OUR STORY

We are a leading supplier of products, solutions and services for industrial process measurement and automation. We offer comprehensive process solutions for flow, level, pressure, analysis, temperature, recording and digital communications across a wide range of industries, optimizing processes with regards to economic efficiency, safety and environmental protection.

OUR PRODUCTS

The origin and core of our business is process measurement technology. Endress+Hauser instruments measure level, flow, pressure and temperature, and they analyze the properties of liquids, gases and solids. They are available in many different versions to meet the requirements of the individual industry and application. Thus, with our portfolio, we are able to provide the right solution for virtually any measurement task: from the simple level switch that prevents overfilling of a tank to the complex Raman analyzer that examines individual molecules.

VISION AND MISSION

We are a successful family company. In laboratory and process automation, customers around the world trust our products, solutions and services to improve their processes, and thus their products, sustainably.

We support our customers to improve their products and manufacture them even more efficiently.

Our business by industry

Our offer covers a wide range of requirements and needs

OUR STORY

Flottweg is a globally recognised leader in mechanical separation technology, with over 70 years of expertise in developing innovative solutions for solid-liquid separation. Founded in Germany, we have built a strong reputation for engineering excellence, reliability, and efficiency. Our mission is to provide sustainable, high-performance separation solutions that optimise industrial processes while minimising environmental impact. With a commitment to research and development, we continuously refine our technologies to meet the evolving demands of industries worldwide. In Vietnam, Flottweg supports both municipal and industrial water and wastewater treatment plants, as well as manure and biogas digestate separating from livestock farming, ensuring efficient resource recovery and regulatory

OUR PRODUCTS

Flottweg' advanced separation technologies play a crucial role in water and wastewater treatment, enabling efficient sludge dewatering, thickening, and liquid-solid separation. Our key products include:

Decanter Centrifuges – Engineered for high-performance sludge dewatering and thickening, reducing disposal costs, and improving sludge handling.

With a proven track record in Vietnam and across Southeast Asia, Flottweg is a trusted partner for industries seeking sustainable and cost-effective water treatment solutions.

OUR RANGE OF SERVICES

Flottweg offers a full suite of services tailored to both the municipal, and industrial water and wastewater industries, ensuring optimal system performance and long-term reliability. Our expertise includes:

- Consultation & Engineering – Providing customised and packaged solutions to improve sludge dewatering, water recycling, and industrial effluent treatment.
- Installation & Commissioning – With our local Vietnamese certified service partner we ensure seamless integration of our equipment into new or existing treatment plants.
- Maintenance & After-Sales Support – Flottweg' local Vietnamese certified service partner offer preventive maintenance, spare parts, and technical support to maximise uptime and efficiency.
- Process Optimisation & Training – Helping clients far beyond the initial sales improve operational performance through expert training and process fine-tuning.

WE UNDERSTAND COMPLEX PROBLEMS AND MAKE THEM EASIER TO SOLVE

OUR STORY

HST Systemtechnik GmbH & Co. KG, founded in 1981, is headquartered in Meschede, Germany.

More than 200 employees of the company are working on the digitalization of municipal infrastructures and developing solutions for the water industry. The company provides technology-leading machinery, equipment as well as IT solutions for critical processes, remote monitoring and control e.g. flood protection system, drainage network management, water management, leakage detection, sewage treatment plants, etc.

Thanks to the in-house IT development, designing and manufacturing, HST can ensure the synergies of all components, customize the solutions to customers' needs, and thus, completely satisfy their expectations.

OUR PRODUCTS

Machines and Equipment:

This encompasses weirs, flushing devices, and equipment for wastewater treatment plants utilizing modern sequencing batch reactor (SBR) technology.

Automation Solutions:

HST develops software for process data management and operational organization, such as SCADA.web—a web-based portal for remote monitoring of decentralized plants and networks in the water and energy industries.

Flood Protection and Stormwater Management:

We offer products designed for flood protection and the management of stormwater projects.

Aeration Systems:

Our product line includes air-jet aerators like the AWS stream jet, used for energy-optimized cleaning of stormwater tanks and sewage storage spaces.

HydroMat-Q

IntelliNet

WATER IS OUR ELEMENT

OUR STORY

INTEWA GmbH develops and distributes products and systems in the areas of water treatment and reuse, as well as stormwater management - including infiltration and retention of stormwater. In order to constantly offer innovative and optimized solutions for these topics, INTEWA conducts continuous research and development.

As pioneers of rainwater technology, we have been in the market since 1993. From the very beginning, both the development of products and the planning of projects have been our main focus. The experience and competence of our employees is fed by the numerous development works and projects. We appreciate the exchange of experience within the association and beyond in our wide competence network of universities and colleges and business partners. Our customers with public, commercial or private construction projects are our top priority.

OUR CERTIFICATES

OUR RANGE OF SERVICES

- Stormwater management and greywater treatment solutions
- Concept creation and preliminary pricing
- Dimensioning with "Rainplaner" software
- Compilation of tenders
- Creation of CAD system drawings
- Support for exporting companies
- Technical documentation
- System monitoring

OUR PRODUCTS

Whether individual products or entire complete systems, when it comes to the treatment or reuse of water, you will find your suitable solution with us. We support you among others in the areas:

- Drinking water from rainwater
- Greywater recycling
- Rainwater harvesting

WORKING FOR A SUSTAINABLE FUTURE

OUR STORY

Molecor South East Asia was established in 2013 to manufacture and distribute PVC-O pipes and fittings in Malaysia and currently distributes the largest range of water conveyance solutions throughout various countries in South East Asia.

By using cutting-edge air molecular orientation technology, developed in Spain, to mechanically transform the amorphous molecular structure of PVC-U into a stratified and homogeneous directional structure, we transform PVC-U into PVC-O and enhance the mechanical properties of pipes and fittings through this orientation process. This technology has made it possible to create the largest range of diameters and pressures for PVC-O pipes and to create uniform pipelines with the first oriented fittings.

All these products are recognized through acceptance and compliance of product certifications globally. They are recognized and listed by Suruhanjaya Perkhidmatan Air Negara (SPAN) under the ISO 16422:2014 product standard, SIRIM Eco Label 054 and MyHijau Mark among others.

OUR PRODUCTS AND SERVICES

Piping systems for potable water supply
Piping systems for sewerage and drainage
Piping systems for buildings
Digital tools to facilitate pipe installation

OUR PROJECTS

Modernization of irrigation community with DN1000 mm PVC-O pipes

Type of water application: Irrigation
Year: 2024
Location: Coria del Río, Seville, Spain
Promoter: La Vega de Coria Irrigation Community
Total length: 18,487 m
Product: TOM® PVC-O pipes DN1000 mm PN 16 bar and DN630-800 mm PN12,5 bar

Pipe Rehabilitation Works Project

Type of water application Potable water supply
Year 2024
Location: Johor, Malaysia
Promoter: Ranhill SAJ Sdn Bhd
Total length: 5,484 m
Product: TOM® PVC-O pipes DN110-200 mm PN16 bar

WATER ENGINEERING AND TECHNOLOGY NEXUS FOR LIVE

OUR STORY

Based in Phnom Penh, Cambodia, WaterNex specializes in holistic water engineering and technology solutions, drawing upon our diverse expertise and experience in both domestic and international contexts. Our capabilities cover a wide range of services, from brief technical assessments to detailed design, work supervision, and asset management. We are committed to ensuring the successful implementation and long-term sustainability of water projects, offering guidance and training for operational and maintenance teams to optimize efficiency and effectiveness.

At our firm, we are committed to delivering innovative, sustainable, and cost-effective solutions that address the complex challenges of water engineering and technology. With a commitment to excellence and a focus on collaboration and partnership, we aim to make a positive impact on communities and the environment.

OUR PRODUCTS AND SERVICES

From drinking water purification to wastewater treatment and management, our team covers all aspects of water quality and sanitation infrastructure. We specialize in engineering, management, monitoring, and data collection, ensuring compliance with regulatory standards and safeguarding public health and environmental integrity. Our team offers a range of equipment such as valves, regulators, smart hydro systems, pumps, and solar powered solutions, integrating cutting-edge technology to enhance the efficiency and reliability of water systems.

Our Water Resource Development Services includes:

- Complex and Basic Water Modeling
- 1-D and 2-D Hydraulics
- Surface Water and Groundwater Assessment
- Dam break Analysis
- Flood Hazard Analysis and Flood Risk Management
- Site Evaluation, Feasibility Studies, and Master Planning
- Stormwater Best Management Practices Construction Documents
- Stormwater Utility Study and Implementation
- Watershed and Stream Condition Assessments

WaterNex is a multidisciplinary engineering consultancy firm, delivering a wide and growing range of technical solutions and cutting-edge technology from the start to the end of our client's project through preliminary design, detail engineering design and construction supervision.

MAKING A DIFFERENCE IN WATER & SANITATION

OUR STORY

We are an international company established under Vietnamese law and working in the fields of water and sanitation.

We are covering a wide range of water-related services, with key staff working for many years in South-East Asia already. Our experts have both been working in numerous donor-financed development aid projects, as well as for private clients in Vietnam, the region and world-wide.

SELECTED CLIENTS

OUR SERVICES

- Urban Stormwater Management / Blue-Green Infrastructure
- Decentralized wastewater treatment and sustainable sanitation
- Integrated water resources management and river rehabilitation
- Up-scaling of access to water and sanitation services
- O&M, Training, Benchmarking, Due Diligence
- Organizational development
- IEC / Community development / Public awareness / Behavior change communication
- Development of Private Sector Participation (PSP) models for public service delivery
- Water, Sanitation and Hygiene (WASH) including development of sustainable pro-poor interventions
- Public utility development

SAFEGUARDING OUR RESOURCES TO PROTECT, FEED AND POWER THE WORLD.

OUR STORY

GEA is one of the world's largest systems suppliers for the food, beverage and pharmaceutical sectors. Our portfolio includes machinery, plants, advanced process technology, components and services, enhancing the sustainability and efficiency of production processes worldwide.

Listed in the German MDAX and STOXX® Europe 600 Index, GEA is also part of the DAX 50 ESG and MSCI Global Sustainability Indices, underscoring its commitment to responsible business practices.

In environmental technology, GEA offers sustainable solutions – from dewatering and thickening sewage sludge to treating drinking water and recovering valuable materials. GEA environmental Decaners ensure reliable, energy- and cost-efficient sludge processing in both stationary and mobile setups.

OUR PRODUCTS

GEA is a sludge specialist with decades of expertise in the wastewater industry. As the need for sustainable water management grows, GEA provides advanced solutions for the treatment of **municipal and industrial wastewater**, as well as for the processing of **manure** in agriculture.

Our **GEA environmental Decanter lines** are engineered to transform biosolids, industrial sludge, manure, and fermentation residues into valuable resources. GEA decanter centrifuges support efficient energy generation and material recovery – delivering both ecological and economic benefits.

For over 130 years, GEA's centrifugal separation technology has set global benchmarks for reliability and performance. Our innovations optimize water and raw material use, enhance production quality, and support environmentally friendly energy practices. With market-leading dewatering performance, GEA biosolids, sludge and manure Decaners help **reduce sludge volume, lower transport and drying costs, and cut CO₂ emissions** – advancing our mission of 'engineering for a better world.'

OUR MISSION:

AGRU supplies high-quality plastics technology that makes customers from different industries successful worldwide.

OUR STORY

AGRU is an Austrian company founded in 1948, with worldwide operations in producing and distributing high-quality plastic products for piping systems and apparatus engineering, environmental technology as well as constructional engineering.

With its competence in producing engineering plastics components and developing tailored solutions, AGRU is present in virtually every sector of industry. The possibilities opened by our products are manifold, just as the requirements of our customers are diverse. The thermoplastics worked by AGRU are extremely high-quality engineering polymers used in virtually all branches of industry where durability, operational dependability, cost certainty and versatility are essential.

AGRU is established as the world's most important single-source supplier for high-quality products made from engineering plastics. Conservation of resources and respect for the environment occupy the foreground in all our business endeavors. Customers all over the world trust the plastics expertise the company has amassed in the course of a lifetime.

OUR CLIENTS

-  Water / gas infrastructure
-  Energy sector
-  Chemical / heavy industries
-  Semiconductor / Life-sciences
-  Tank and apparatus building
-  Naval and aviation industries
-  Civil engineering / mining
-  Building construction

OUR PRODUCTS

Different materials, technologies and products plus a worldwide network of partners all contribute to making AGRU a single-source supplier. For large-scale projects and special solutions in particular, AGRU is able to offer its customers a one-stop shopping.

One-stop-shopping
